

MEETING MINUTES

Project: “Fábula Dental” Management System

Date: May 30, 2026

Time: 12:00 PM

Modality: In-person

1. Meeting Location

Clinic: Fábula Dental

Address: Av. Gral. Rumiñahui & Isla Isabela, Edificio Platinum Plaza, Office 5, 171102

2. Participants

- Dra. Ivonne Moya – Pediatric Dentist
- Team CodeXplorers:
 - Andrés Cárdenas
 - Kerly Chuqui
 - Victoria Díaz

3. Meeting Objective

To gather and validate the functional requirements of the web system for the pediatric dental clinic, defining the main modules (features), user roles, and key operational workflows.

4. Topics Discussed

4.1 System Modules Definition (Features)

It was agreed to structure the system into three main modules:

- Patient Registration and Analytics
- Medical Supplies and Financial Inventory Management
- Payment Registration

Each module will have a single responsible role.

4.2 User Access and Authentication

The system will require user authentication through a login process.

Each module will only be accessible according to the assigned role:

- Dentist → Patient Registration
- Administrator → Supplies Management

- Receptionist → Payment Registration

Access control will be integrated within each module.

4.3 Patient Registration

The system must allow:

- Registration of comprehensive patient personal data, including email, gender, phone number, and specific reason for consultation.
- Automatic enforcement and validation of a legal guardian in case the patient is a minor (under 18).
- Automatic assignment of a pediatric category and dosage restriction factors based on the exact age of the patient.
- Calculation of days remaining until the patient's next birthday and alerts if it is their birthday week.
- Automatic assessment of eligibility for senior discounts (for patients 65 years or older).
- Dynamic estimation of consultation time, adding extra minutes for very young, elderly, or complex cases.
- Assignment of a contact priority score based on urgent keywords in the consultation reason to highlight immediate attention needs.

•

4.4 Medical Supplies Management

An advanced inventory control and financial tracking system will be implemented, including:

- Supplies registration (including name, available quantity, unit cost, order date, and expiration date).
- Automatic calculation and updating of expiration statuses (Current, NextExpiration, Expired).
- Real-time calculation of the total inventory asset valuation.
- Restock provisioning analysis to generate a consolidated budget for items running low (quantity ≤ 5).
- Automatic calculation of direct financial losses caused by expired items.
- Capital at risk assessments to quantify the monetary value of items nearing their expiration date.
- Filtering capabilities to identify supplies by specific statuses or maximum quantity thresholds.

4.5 Payment Registration

The system must allow:

- Recording patient payments (categorized as Deposit or Final Payment).
- Handling partial payments (down payments) and final payments.
- Retrieving complete payment histories per patient or for the clinic in general.

It was agreed that:

- A down payment must be made before treatment.
- The system will automatically calculate and update the current status of the payment record (Pending, Partial, or Completed) based on the type of payment registered.

5. Agreements Reached

- The system will consist of three clearly defined main features with advanced automated analytics for patients and inventory.
- Each module will have a single assigned role with login-based access control.
- Patient registration will include dynamic smart validations (consultation times, priority scoring, discounts, and pediatric categories).
- Payments will follow a partial and full payment logic to track payment statuses.
- Inventory will include not just date control, but automated financial risk and restock budget analysis.

6. Next Steps

- Development of use case diagrams.
- Design of the database model.
- Development of the initial system prototype.
- Functional validation with the clinic.

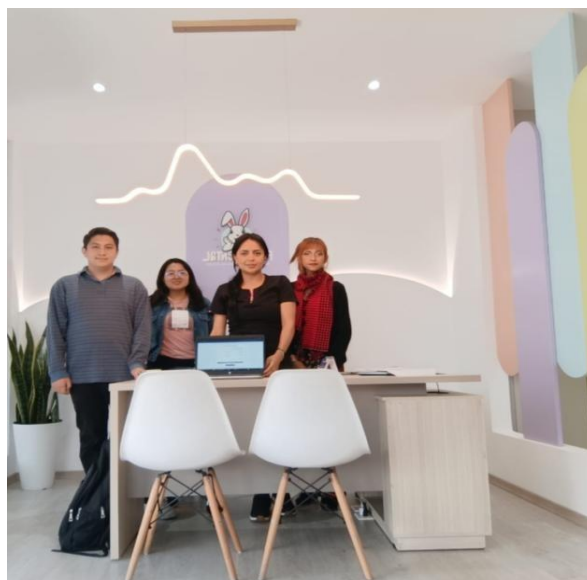

7. Observations

Dr. Ivonne Moya emphasized the importance of:

- Keeping the system simple and user-friendly
- Avoiding data duplication
- Prioritizing payment control and proper inventory management

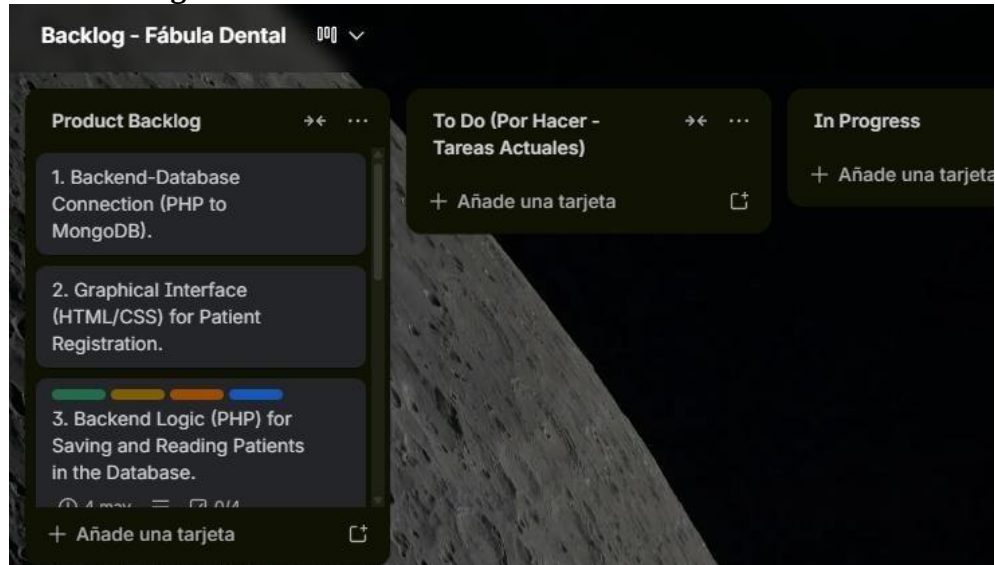

8. Evidence
